Book Review: FLASHBACK TO THE... AWESOME '80S

Readers will take a trip back in time to the decade of the 1980s! Cabbage Patch Kids and Rubik's Cube were some of the popular toys. Playing video games could now be done on game consoles at home instead of going to a video arcade. The channel MTV debuted on television. Cell phones looked like bricks and were very expensive. People used VCRs to record their favorite television shows. Computers were big and awkward and not portable.

These are just a few of the inventions and fads of the 1980s that readers will learn about. Technology has come a long way in the last few decades. Readers will be amazed at the way things were in the '80s compared to the things we have today.
